

Drawing Geological Structures

By Jorn H. Kruhl

Table of Contents

About the Author

Preface

1 Introduction

- 1.1 Why Do We Need Drawings?
 - 1.2 The Tools
 - 1.3 Sizes of Drawings
 - 1.4 Geological Versus Artistic Drawing
 - 1.5 Drawing With Symbols
 - 1.6 Realistic Drawing
 - 1.7 The Fractal Geometry of Geological Fabrics
 - 1.8 Basic Rules of Geological Drawing
- References

2 Rock Thin Sections

- 2.1 Drawing as a Form of Microscopy
 - 2.2 Drawing with Various Tools
 - 2.3 Foundations of Thin-Section Drawing
 - 2.4 Minerals and Their Characteristic Fabrics Under the Microscope
 - 2.5 Sketches for Fast Documentation
 - 2.6 Development of Precise Thin-Section Drawings
 - 2.7 Digital Reworking of Manual Thin-Section Drawings
 - 2.8 Digital Drawing
- Summary
References

3 Specimen Sections

- 3.1 The Geological Message of a Drawing
 - 3.2 Schematic Representation of Minerals
 - 3.3 Schematizing Rocks and their Structures
 - 3.4 Development of Drawings
 - 3.5 Illustration on Different Scales
 - 3.6 Detailed Drawings of Sample Cuts
- Summary

4 Drawing Rock Structures in Three Dimensions

- 4.1 Foundations
 - 4.2 The Development of Schematic 3D Drawings
 - 4.3 Field Drawing
 - 4.4 Digital Processing
 - 4.5 Rules of Labeling
- Summary
References

5 Geological Stereograms

- 5.1 Foundations
 - 5.2 Orientation and Extension
 - 5.3 Additions and Labeling
 - 5.4 Digital Processing
- Summary
References

6 Solutions
