Introduction	vii
PART 1. STONE PROPERTIES AND TESTING	
Standard engineering tests for aggregate: What do they actually measure?	<i>P. P. Hudec</i> 3
Introduction	3
Properties of "frost"-sensitive rocks	3
Causes of rock breakdown	5
What do standard engineering soundness tests measure?.....	6
Selected bibliography	6
(11 figures)	
Absorption and other properties of carbonate rock affecting soundness of aggregate	<i>R. D. Harvey, J. W. Baxter, G. S. Fraser, and C. B. Smith</i> 7
Abstract	7
Introduction	7
Samples and tests	9
Petrographic classification	9
Analysis of results	9
Discussion	14
Conclusions	16
References cited	16
(3 figures; 5 tables)	
Behavior of brittle rock in multi-increment creep tests	<i>C. E. Norman</i> 17
Abstract	17
Introduction	17
Test specimens	17
Test equipment	18
Test results	19
Qualitative failure hypothesis	21
References cited	23
(12 figures)	

Aggregates and pavement skid resistance	<i>F. A. Renninger and F. P. Nichols, Jr.</i>	25
Research plan		25
Results of the test program		26
Discussion of results		26
Summary		28
Acknowledgment		29
References cited		29
(1 figure; 5 tables)		
Direct tensile test for bond strength between Portland cement paste and rock or mineral surfaces	<i>M. A. Ozol</i>	31
Abstract		31
Introduction		31
Bond strength testing		31
Results		33
References cited		34
(3 figures; 1 table)		
PART 2. STONE WEATHERING		
Progress and problems in rock weathering related to stone decay	<i>W. D. Keller</i>	37
Introduction		37
Agents and energies that activate rock weathering and decay		38
Weathering of rocks by aqueous dissolution		39
Dissolution in water containing dissolved carbon dioxide		39
Chemical weathering of aluminum-silicate minerals and rocks		41
Weathering by oxidation		44
Effect of temperature on chemical weathering		44
Prevention of decay in structural stone		45
References cited		45
Rock weathering on the molecular level	<i>P. P. Hudec</i>	47
Abstract		47
Introduction		47
Pore size and internal surface area relationships to weathering		47
Statistical methods		48
Summary and conclusion		50
Selected bibliography		50
(4 tables)		
Stone decay in urban atmospheres	<i>E. M. Winkler</i>	53
Conclusions		57
References cited		58
(10 figures; 3 tables)		

Stone weathering: A literature review	<i>E. M. Winkler</i>	59
Selected bibliography		60
 PART 3. STONE PRESERVATION		
Development of performance criteria for the selection of stone preservatives	<i>G. Sleater</i>	65
Introduction		65
Testing of stone preservatives		65
Performance criteria for stone preservatives		70
Comments		71
Acknowledgments		71
References cited		71
(10 figures; 4 tables)		
 Certain epoxies, fluorocarbon-acrylics, and silicones as stone		
preservatives	<i>K. L. Gauri and M. V. A. Rao</i>	73
Abstract		73
Introduction		73
Materials and treatment		73
Testing		74
Results		75
Conclusions		79
References cited		79
(9 figures)		
 Properties of laser-cleaned Carrara marble surfaces		
Abstract	<i>J. F. Asmus</i>	81
Introduction		81
Experimental apparatus		81
Test samples		82
Surface absorptance		82
Scanning electron microscopy of marble surfaces		84
Comparison of cleaning techniques		85
X-ray fluorescence surface analyses		87
Conclusions		87
Acknowledgments		87
References cited		88
(13 figures; 1 table)		
 Recent advances in stone conservation in Germany		
Introduction	<i>J. Riederer</i>	89
Preliminary tests		89
Preservation		90
Summary		92

Bibliography on stone preservation by Josef Riederer	93
(3 figures)	
Weathering and restoration of Borobudur Temple, Indonesia	<i>G. Hyvert</i> 95
Introduction	95
Kinds of weathering	95
Physicochemical factors	98
Conservation and preservation program	99
Conclusions	100
(6 figures)	
Conservation of stone: A literature review	<i>K. L. Gauri</i> 101
Cleaning	101
Dampness control, consolidation, and surface protection	102
Evaluation of preservatives and preservation treatments	102
Preservation of adobe	103
Composite for patching stone and replacement casts	103
Selected bibliography	103
