

## ***Contents***

***1. Focused ion beam (FIB): site-specific sample preparation, nano-analysis, nano-characterization and nano-machining***

Richard Wirth

***2. Nanopetrology of pyroxenes: reconstruction of geodynamic parameters using TEM techniques***

Frank E. Brenker

***3. Electron energy-loss spectroscopy and energy-filtered transmission electron microscopy: Nanoscale determination of  $Fe^{3+}/\Sigma Fe$  ratios and valence-state mapping***

Ute Golla-Schindler and Peter A. van Aken

***4. Secondary Ion Mass Spectrometry—less conventional applications: TOF-SIMS, molecules and surfaces***

Ian Lyon and Torsten Henkel

***5. Ion microprobe analysis: Basic principles, state-of-the-art instruments and recent applications with emphasis on the geosciences***

Bärbel W. Sinha and Peter Hoppe

***6. Synchrotron radiation micro- and nano-spectroscopy***

L. Vincze, G. Silversmit, B. Vekemans, R. Terzano, F. Brenker, M. Spagnuolo, and L. Medici

***7. Reactivity of mineral surfaces at nano-scale: kinetics and mechanisms of growth and dissolution***

Carlos M. Pina and Guntram Jordan

***8. Nanoparticle-host interactions in natural systems***

Udo Becker, Martin Reich, and Subhashis Biswas
