

EMU Notes in Mineralogy—Volume 9
Advances in the Characterization of Industrial Minerals
Edited by G.E. Christidis

Contents

1. Industrial minerals: significance and important characteristics

G.E. Christidis

2. The geological setting for industrial mineral resources

Peter W. Scott

3. X-ray powder diffraction with emphasis on qualitative and quantitative analysis in industrial mineralogy

D.L. Bish and M. Plötze

4. Particle size and shape characterization: current technology and practice

J.R. Hart, Y. Zhu and E. Pirard

5. Thermal analysis in the characterization and processing of industrial minerals

K. Emmerich

6. Application of vibrational spectroscopy to the characterization of phyllosilicates and other industrial minerals

J. Madejová, E. Balan and S. Petit

7. Electron microbeam analysis techniques used for the characterization of industrial minerals

M.I. Pownceby and C.M. MacRae

8. Image analysis for advanced characterization of industrial minerals and geomaterials

E. Pirard and P. Sardini

9. Industrial clays

G.E. Christidis

10. Industrial clay minerals as nanomaterials

R.A. Schoonheydt and F. Bergaya

11. Portland cement and other calcareous hydraulic binders: history, production and mineralogy

J. Elsen, G. Mertens and R. Snellings
