PREFACE .....	xiii
ABSTRACT .....	1
CHAPTER I—GEOGRAPHY AND HISTORICAL REVIEW .....	5
Geography .....	5
Historical review .....	7
CHAPTER II—GRENVILLE SERIES .....	11
General statement .....	11
Amphibolite .....	11
Pitcairn gneiss complex .....	15
General considerations .....	15
Feldspathic quartzite and rocks of granitic and syenitic composition .....	15
Skarn, pseudo-shonkinite, pseudo-pyroxenite, and migmatite .....	16
CHAPTER III—ANORTHOSITIC, GABBROIC, AND DIORITIC ROCKS .....	19
Anorthosite, gabbroic anorthosite, and anorthositic gabbro, general statement ..	19
Main massif, anorthositic series .....	19
Marcy, Whiteface, and transitional facies .....	19
Massif a composite of several units .....	21
St. Regis-Marcy unit .....	23
Jay-Mt. Whiteface unit .....	25
Port Kent-Westport units .....	26
Primary structures and textures of anorthositic rocks .....	26
Block structure .....	27
Chemical composition and petrography .....	28
Mineralogy .....	28
Late gabbroic differentiates and pegmatitic and aplitic facies .....	33
Satellitic intrusions .....	39
Metamorphosed layers of Grenville series included in and along contact of anorthosite .....	39
Syntectics and modifications of anorthositic rocks in contact zone with Grenville .....	42
Gabbro <i>in statu nascendi</i> (?) or included Grenville gneiss and skarn .....	44
The Border Whiteface facies a chill zone .....	46
Post-deformation recrystallization and replacement .....	48
Carthage mass .....	49
Russell feldspathic gabbro .....	53
Feldspathic gabbro—southeast corner, Lake Bonaparte quadrangle .....	54
Metagabbro .....	55
Metagabbro, general statement .....	55
Metagabbro in Grenville series of the northwest Adirondacks .....	56
General statement .....	56
Geers Corners gabbro .....	57

	Page
Pleasant Lake gabbro . . . . .	59
Contact metamorphism . . . . .	61
Metagabbro within belt of granite in northwest Adirondacks . . . . .	61
Metagabbros of eastern Adirondacks . . . . .	62
Chemical composition and petrography . . . . .	62
Summary and comparison . . . . .	62
Mafic metagabbros . . . . .	64
Rossie dioritic series . . . . .	67
General statement . . . . .	67
Chemical composition and petrography . . . . .	68
<b>CHAPTER IV—DIANA QUARTZ SYENITIC COMPLEX . . . . .</b>	<b>73</b>
Introduction . . . . .	73
Chemical analyses and petrography . . . . .	73
Augite syenite in outlying sheets . . . . .	74
Augite quartz syenite—border facies . . . . .	78
Augite syenite at immediate contact of augite quartz syenite and limestone . . . . .	79
Pyroxene syenite . . . . .	79
Feldspar-rich pyroxene syenite . . . . .	80
Shonkinite . . . . .	81
Ilmenite-magnetite pyroxenite . . . . .	81
Pyroxene syenite and pyroxene-hornblende quartz syenite (transitional facies) . . . . .	82
Hornblende quartz syenite . . . . .	83
Hornblende granite . . . . .	84
Hornblende quartz syenite—a mixed facies . . . . .	85
Syenitic rocks in southeast corner of Lowville quadrangle . . . . .	86
Contact metamorphism . . . . .	87
Types of rock and mineral relationships in stratiform sheets useful as criteria in interpretation of structure . . . . .	88
General statement . . . . .	88
Gravity stratification—upward gradation from mafic to felsic facies . . . . .	89
Problem of ilmenite-magnetite layers . . . . .	91
Variation in plagioclase . . . . .	92
Application of principles of stratiform sheets to Diana complex . . . . .	92
Comparison of Diana with Sudbury and Mount Dromedary sheets . . . . .	100
Magmatic differentiation of Diana complex . . . . .	102
Nature of primary magma . . . . .	102
Interrelationships of major members of Diana complex . . . . .	104
Processes of magmatic differentiation . . . . .	105
Quartz syenite modified to syenite in contact zone with limestone . . . . .	107
Mafic quartz syenite resulting from modification of granite in contact zone with metagabbro . . . . .	108
<b>CHAPTER V—SANTA CLARA, TUPPER-SARANAC, AND OTHER QUARTZ SYENITIC COMPLEXES . . . . .</b>	<b>111</b>
Santa Clara complex . . . . .	111
General description of facies . . . . .	111
Chemical composition and petrography of representative specimens . . . . .	114
Structural and genetic relationships of various facies . . . . .	114
Tupper-Saranac quartz syenitic complex . . . . .	116

	Page
General relationships . . . . .	116
Mineralogical and chemical composition . . . . .	117
Structure . . . . .	119
Origin of various facies of complex . . . . .	121
Syenite dikes in anorthosite . . . . .	123
General statement . . . . .	123
Jenkins Mountain polymict syenite breccia dike . . . . .	123
Other dikes . . . . .	124
Syenite-anorthosite migmatitic or transitional rocks (Keene gneiss) . . . . .	124
Quartz syenitic series of eastern and southern Adirondacks . . . . .	126
Syenitic rocks near Ausable Forks . . . . .	126
Medium equigranular quartz syenite . . . . .	127
Mafic quartz syenite . . . . .	128
Pyroxene syenite: assimilation facies . . . . .	128
Transition (?) between quartz syenite and granite . . . . .	128
Aberrant (?) syenitic rocks . . . . .	129
<b>CHAPTER VI—HYPERSTHENE METADIABASE DIKES IN DIANA COMPLEX . . . . .</b>	<b>133</b>
<b>CHAPTER VII—YOUNGER GRANITE SERIES WITH LOCAL SYENITE FACIES . . . . .</b>	<b>135</b>
Introduction . . . . .	135
Hornblende granite of Lowville-St. Regis batholith . . . . .	135
Hornblende and biotite syenite in limestones of Grenville belt . . . . .	140
Granites (Hermon and Antwerp types) in Grenville belt . . . . .	142
General statement . . . . .	142
Hermon type of granite . . . . .	142
Antwerp type of granite . . . . .	145
Granite, Alexandria type, in Grenville belt . . . . .	145
Structural relationships . . . . .	149
Lowville-St. Regis batholith . . . . .	149
Porphyritic granite (Hermon type), equigranular granite (Antwerp type), and related syenite . . . . .	152
Granite (Alexandria type) . . . . .	153
Equivalents of the Lowville-St. Regis granite batholith in the Grenville belt . . . . .	158
Origin of various granitic facies . . . . .	160
Granite pegmatites . . . . .	161
Petrography of granite pegmatites . . . . .	161
Structural relationships of granite pegmatites . . . . .	162
Arteritic migmatites . . . . .	162
Replacement pegmatites . . . . .	163
Arteritic pegmatites conformable with plications, "ptygmatic folds" . . . . .	163
Crenelate or meander—fracture type of pegmatite . . . . .	164
Agmatitic migmatites . . . . .	165
Age of granite pegmatites . . . . .	166
Thermal solutions from granitic magmas . . . . .	166
General statement . . . . .	166
Contact metamorphic aureoles of Alexandria type granite against limestone . . . . .	168
General statement . . . . .	168
Amphibolites . . . . .	169
Diopside or actinolite contact zones . . . . .	169

	Page
Quartz-oligoclase gneiss . . . . .	170
Garnet-sillimanite gneiss . . . . .	171
Contact aureoles of Alexandria type granite against aluminous gneisses . .	172
Products of thermal solutions in limestones . . . . .	173
Products of artieritic pegmatites and thermal solutions in schists . . . . .	175
Products of artieritic pegmatites and thermal solutions in amphibolite . . .	176
Hypothermal and mesothermal replacement veins . . . . .	178
General statement . . . . .	178
Magnetite deposits . . . . .	178
Pyritic sphalerite deposits . . . . .	179
Pyrite-pyrrhotite deposits . . . . .	179
Tremolite and talc veins . . . . .	179
Relationships of replacement veins . . . . .	179
Hypothermal fissure veins . . . . .	180
Phenomena in contact zones between metagabbro and granite . . . . .	181
Pseudo-chill zone of metagabbro against granite . . . . .	181
Development of diorite and amphibolite on metagabbro side of contact . .	185
Development of syenite on granite side of gabbro-granite contact . . . . .	188
Phenomena in contact zone between granite and border facies of anorthosite .	189
Phenomena in contact zone between granite and pyroxene quartz syenite . . . .	190
CHAPTER VIII—DIABASE, SYENITE PORPHYRY, AND RHYOLITE DIKES . . . . .	191
Diabase dikes . . . . .	191
Syenite porphyry and rhyolite dikes . . . . .	195
CHAPTER IX—THE ADIRONDACK IGNEOUS COMPLEX AS A WHOLE . . . . .	197
Introduction . . . . .	197
Earliest intrusives: (?) metagabbro and granite . . . . .	197
(?) Metagabbro . . . . .	197
(?) Laurentian or older granite . . . . .	197
(?) Laurentian metadiorite . . . . .	201
Anorthositic rocks: distribution, form, and origin . . . . .	201
Distribution . . . . .	201
Form of anorthositic masses . . . . .	202
Previous theories of origin . . . . .	204
Anorthosite masses in general of two contrasted modes of occurrence and	
relationships . . . . .	208
The primary magma of the Adirondack anorthosite . . . . .	210
General statement . . . . .	210
Syenite-granite magmas complementary to anorthosite and gabbro crys-	
tal accumulates (?) . . . . .	211
Gabbroic magmas complementary to anorthosite . . . . .	214
Primary magma approximately equivalent to average of border facies:	
gabbroic anorthosite . . . . .	216
Metagabbros . . . . .	221
Comparison of average Adirondack metagabbro . . . . .	221
Forms of intrusion and mode of origin . . . . .	222
Age . . . . .	224
Quartz syenite . . . . .	225
Average composition of quartz syenitic rocks . . . . .	225

	Page
Comparison of Adirondack syenitic series with other comagmatic suites . . .	225
Younger granites . . . . .	230
Average composition . . . . .	230
Form of intrusion and mechanics of emplacement of quartz syenite and granite . . . . .	232
Composition and derivation of primary magma or magmas . . . . .	234
Large-scale structure of the Adirondacks . . . . .	237
General statement . . . . .	237
Fan structure in northwest Grenville belt . . . . .	238
Discordant belt of anorthosite masses and local disturbed structures in east Grenville belt of southern Adirondacks . . . . .	243
West-central Adirondacks . . . . .	245
Anticlinal structure of the Adirondacks . . . . .	245
Fracture systems . . . . .	246
Comparison with rocks of Grenville subprovince of Canadian Shield . . . . .	249
<b>CHAPTER X—REGIONAL DYNAMO-THERMAL METAMORPHISM—METAMORPHIC ZONES AND FACIES . . . . .</b>	<b>251</b>
Introduction . . . . .	251
Classification of metamorphic phenomena . . . . .	251
Zone of cataclastic deformation (Zone 1) . . . . .	253
Zone of granuloblastic and flaser gneisses (Zones 2 and 2-a) . . . . .	254
Garnet-bearing granuloblastic and flaser gneisses (Zones 1-a and 3) . . . . .	254
Zone of primary gneissoid foliation (Zones 4 and 4-a) . . . . .	256
Metamorphic facies development of Grenville . . . . .	257
Amphibolite . . . . .	257
Grenville bands and quartz veins in Diana complex . . . . .	257
Metamorphic facies development in anorthosite and gabbroic anorthosite . . . . .	258
Metamorphic facies development within Russell feldspathic gabbro . . . . .	260
General statement . . . . .	260
Development of granuloblastic scapolite-hornblende-labradorite gneiss . . . . .	262
Metagabbro partly replaced by orthoclase and quartz . . . . .	263
Origin . . . . .	266
Metamorphic facies development in metagabbros . . . . .	267
General statement . . . . .	267
Primary olivine gabbro facies . . . . .	267
Green hornblende facies of Zone 1 . . . . .	268
Hornblende-hypersthene-augite facies of Zone 2 . . . . .	268
Garnetiferous facies of Zone 3 . . . . .	270
General statement . . . . .	270
Labradorite facies . . . . .	270
Andesine facies . . . . .	271
Oligoclase facies . . . . .	273
Garnetiferous facies of Zone 1-a . . . . .	275
Summary comparison of facies of metagabbro in different zones . . . . .	275
Metamorphic facies development in syenitic rocks . . . . .	282
Diana complex . . . . .	282
General statement . . . . .	282
Gneissoid syenite—texture of primary crystallization . . . . .	282
Mortar gneiss . . . . .	282

	Page
Augen gneiss.....	283
Ultramylonite and ultracataclastic mylonite.....	283
Flaser gneiss.....	284
Granoblastic gneiss.....	285
Recrystallization concomitant with deformation.....	285
Post-deformation alteration.....	286
Santa Clara complex.....	287
Piseco Dome—Zone 1-a.....	287
Comparison of facies of pyroxene quartz syenite in different zones.....	288
Metamorphic facies development in hypersthene metadiabase dikes.....	290
Metamorphic facies development in granite.....	292
Alexandria type in Grenville belt, Zone 1.....	292
Granite in main core.....	293
Coronites and garnets.....	294
Coronites and dactylic intergrowths.....	294
Correlation of coronites and mineral facies.....	298
Concretionary structure.....	298
Origins of garnet.....	300
General summary.....	302
CHAPTER XI—ORIGIN OF METAMORPHISM.....	305
Evidence for extensive plastic flow.....	305
Introduction.....	305
Pattern of regional foliation.....	307
Linear structure.....	308
Foliation of dikes.....	313
Regional variation in mineral and physical facies.....	316
Quartz syenite pegmatite veins.....	317
Foliation of inclusions in igneous rocks.....	319
Sills and gravity-stratified sheets normally massive or gneissoid.....	321
Significance of variation in metamorphism of members of Grenville series.....	321
Ages of metamorphism.....	321
Period of formation of garnet.....	321
Significance of vane sheets.....	322
Foliation of younger granites.....	323
Hypothesis of deformation in magmatic stage in intrusions at different depths.....	325
Physical conditions during regional metamorphism.....	326
General statement.....	326
Uniform pressure; depth.....	328
Nonuniform pressure.....	329
Temperature.....	329
Comparison with Vredefort dome.....	332
Conclusion.....	332
BIBLIOGRAPHY.....	334
INDEX.....	343

# Illustrations

PLATE	FACING PAGE
1. Migmatites of anorthosite and skarn . . . . .	40
2. Granite pegmatite veins . . . . .	41
3. Gneisses modified by thermal solutions . . . . .	178
4. Marcy anorthosite . . . . .	179
5. Whiteface anorthosite . . . . .	262
6. Massive and foliated gabbro . . . . .	263
7. Granoblastic metagabbro gneisses . . . . .	272
8. Metagabbro dike rock . . . . .	273
9. Massive syenite . . . . .	282
10. Quartz syenite mortar gneiss . . . . .	283
11. Granite augen gneiss . . . . .	286
12. Syenite mylonite . . . . .	287
13. Quartz syenite flaser gneiss . . . . .	290
14. Quartz syenite and granite granoblastic gneisses . . . . .	291
15. Garnet coronas in quartz syenite . . . . .	296
16. Massive and granoblastic quartz syenite . . . . .	297
17. Gneissoid and granoblastic granite . . . . .	300
18. Granite gneiss . . . . .	301
19. Gneissoid granite . . . . .	318
20. Quartz syenite pegmatites . . . . .	319
21. Geologic map of a part of Northwest Adirondacks . . . . .	Back cover

  

FIGURE	PAGE
1. Index map showing location of Adirondack Mountains . . . . .	5
2. Map of platy foliation in the Adirondack anorthosite and its vicinity . . . . .	20
3. Sketch map . . . . .	22
4. Geologic map of Diana quartz syenitic intrusive complex and surrounding rocks . . . . .	75
5. Section across Diana complex along Jenny Creek . . . . .	96
6. Generalized section of Diana complex southeast of Harrisville . . . . .	97
7. Generalized section south and southeast from Natural Bridge across Diana complex . . . . .	98
8. Geologic map of Santa Clara complex and surrounding rocks . . . . .	112
9. Generalized section of porphyritic granite . . . . .	153
10. Sketch showing location of anticlinal granite phacoliths and deformed phacolith-like sheets of granite . . . . .	154
11. Inferred structure section across Gouverneur and Reservoir Hill phacoliths . . . . .	155
12. Inferred structure section across Canton and Pyrites phacoliths . . . . .	156
13. Possible relationships of syenite and anorthosite in Adirondacks . . . . .	205
14. Highly generalized northeast-southwest structure section through the Adirondack anorthosite body . . . . .	205
15. Relationships of rocks in Pigeon Point sill, Minnesota . . . . .	206
16. Relationships of rocks in the Adirondacks . . . . .	206
17. Relationships of gabbro and syenite . . . . .	207

FIGURE	PAGE
18. Sketch showing relations of metagabbro dikes to foliation of anorthositic rocks . . . . .	223
19. Comparison of mineral variation of certain rock series . . . . .	228
20. Plan showing rock relationships around the Piseco dome . . . . .	232
21. Structure section showing rock relationships on Piseco dome . . . . .	233
22. Generalized trends of foliation in the Adirondacks . . . . .	238
23. Generalized orientation of linear structure in the Adirondacks . . . . .	239
24. Generalized zones of metamorphism in the Adirondacks . . . . .	240
25. Schematic structure section across the Western Adirondacks . . . . .	241
26. Sketch of drag-folded hypersthene metadiabase sheet in quartz syenite . . . . .	242
27. Alternative relationships of mineral associations . . . . .	280
28. Analyses of metagabbro and amphibolite . . . . .	281
29. Relationships between some known fold axes and linear structure . . . . .	309
30. Foliation across anorthosite and "tongues" and "dikes" of syenite, locally with labradorite crystals . . . . .	315
