

Contents

<i>Preface</i>	vii
<i>Acknowledgments</i>	xi
<i>Abstract</i>	3
1. Introduction and Background	5
Basic geology	5
<i>Geologic framework</i>	7
<i>Geologic structure</i>	8
<i>Formation of black shale</i>	9
<i>Marcellus boundaries</i>	10
Petroleum and natural gas formation	14
<i>Conventional resources</i>	14
<i>Unconventional resources</i>	16
2. The History of U.S. Shale Gas Studies	17
Eastern Gas Shales Project	18
<i>Field processing of shale core</i>	18
<i>Laboratory processing</i>	19
<i>EGSP cores</i>	22
Institute of Gas Technology tight gas research	22
<i>Contributions of Phil Randolph</i>	25
<i>IGT core analysis of shale</i>	26
<i>IGT core analysis results and discussion</i>	29
<i>Advances in shale core analysis technology</i>	33
The demise of unconventional gas research programs	34
3. Production of Marcellus Shale Gas	37
Background	38
<i>Drilling</i>	39
<i>Drill rigs</i>	42
<i>Well casing and groundwater protection</i>	43
<i>Borehole cement</i>	44
Hydraulic fracturing	45
<i>Hydraulic fracturing chemicals</i>	46
<i>The hydraulic fracturing process</i>	47
Produced fluids	49
<i>Naturally occurring radioactive material</i>	51
Natural fractures and emerging technologies	53
Shale gas resources	56
<i>Resource assessment</i>	57

<i>Other shales</i>	58
Resource development	59
<i>Social license</i>	61
<i>International resources</i>	62
4. Risks to the Environment	65
Sources of risk	66
Environmental concerns	68
<i>Peer-review process</i>	70
<i>Common concerns</i>	70
Shale gas impacts	73
<i>Risk assessment</i>	74
<i>Historical data</i>	75
Hydraulic fracturing chemicals	75
<i>The “Halliburton loophole”</i>	76
<i>Hydraulic fracturing and aquifers</i>	76
Land and watershed impacts	79
Contaminant hydrology	83
<i>Common contaminants</i>	85
<i>Other sources of contaminants</i>	87
Water availability	88
Other issues	90
<i>Induced seismicity</i>	90
<i>Fugitive emissions</i>	90
<i>Abandoned wells</i>	91
<i>Silica dust</i>	92
<i>Economics</i>	92
<i>Social issues</i>	93
5. Questions and Investigations	97
Improved understanding of environmental impacts	97
<i>Fate of injected frac water</i>	99
<i>High TDS in produced brine</i>	99
<i>Stray gas in groundwater</i>	100
<i>Watershed management practices and drilling</i>	103
<i>Leaching of black shale cuttings and other solid waste</i>	104
<i>Fate and transport of frac chemicals</i>	106
Production engineering research	106
Carbon dioxide sequestration	108
<i>Geologic storage in shale</i>	109
<i>Storage risk assessment</i>	109
New uses for natural gas	110
<i>Transportation fuel</i>	112
<i>Electric power generation</i>	114
6. Summary and Conclusions	119
Appendix A. Glossary and Acronyms	123
Appendix B. Conversion Table	131
References Cited	133
About the Author	143
