Introduction

Michael V. Mints

Chapter 1. Tectonic zoning of the Early Precambrian crust of the East European Platform

Michael V. Mints

1. Introduction
- 1.1. Late Paleoproterozoic orogens
- 1.2. Middle Paleoproterozoic orogens
- 1.3. Fragments of the Archean ancient continents

Chapter 2. Mesoarchean Kola–Karelia continent

Michael V. Mints et al.

2. Introduction

Michael V. Mints
- 2.1. Paleoarchean and Mesoarchean microcontinents

Michael V. Mints
- 2.2. Mesoarchean greenstone belts: Island-arc systems, accretionary orogens, and mature island arcs (microcontinents)

Michael V. Mints
- 2.3. Mesoarchean microcontinents of the Belomorian Province: Mature island arcs

Michael V. Mints
- 2.4. The Mesoarchean-Neoproterozoic Belomorian eclogite province

Ksenia A. Dokukina, Alexander N. Konilov, Michael V. Mints, Elena A. Belousova, Peter A. Dokukin, Tatiana V. Kaulina, Lev M. Natapov, and Konstantin V. Van

Chapter 3. Neoproterozoic intracontinental areas of sedimentation, magmatism, and high-pressure metamorphism (hot regions) in eastern Fennoscandia

Michael V. Mints

3. Introduction
- 3.1. Karelian–Belomorian area of high-temperature metamorphism and magmatism (hot region)
- 3.2. Kola area of high-temperature metamorphism and magmatism (hot region)

Chapter 4. Northeastern part of the Archean Sarmatia continent

Michael V. Mints

4. Introduction
- 4.1. Kursk microcontinent
- 4.2. Khopior microcontinent

Chapter 5. Neoproterozoic Volgo-Uralia continent

Michael V. Mints, Irina B. Philippova, Pavel S. Babayants, Yury I. Blokh, and Alexey A. Trusov

5. Introduction
- 5.1. Tectonic zoning
- 5.2. Archean rocks
- 5.3. Metamorphism
- 5.4. Geochronology
- 5.5. Ovoids
- 5.6. Interovoidal domain
- 5.7. Evolution of structures and rock associations of Volgo-Uralia continent

Chapter 6. Middle Paleoproterozoic Bryansk-Kursk-Voronezh intracontinental collisional orogen

Michael V. Mints, Irina B. Philippova, Pavel S. Babayants, Yury I. Blokh, and Alexey A. Trusov

6. Introduction

- 6.1. Krivoi Rog–Bryansk intracontinental collisional orogen
- 6.2. Kursk magnetic anomaly intracontinental collision orogen
- 6.3. East Voronezh collisional orogen
- 6.4. Paleoproterozoic complexes of Volgo-Uralia
- 6.5. Evolution of the Bryansk–Kursk–Voronezh intracontinental collisional orogen

Chapter 7. Middle Paleoproterozoic active continental margin of Sarmatia

Michael V. Mints, Irina B. Philippova, Pavel S. Babayants, Yury I. Blokh, and Alexey A. Trusov

- 7.1. Osnitsa-Mikashevichi continental margin volcano-plutonic belt
- 7.2. Serpukhov continental margin volcano-plutonic belt
- 7.3. Geodynamic interpretation

Chapter 8. Late Paleoproterozoic Lapland–Mid-Russia–South Baltia intracontinental collisional orogen

Michael V. Mints et al.

8. Introduction

Michael V. Mints

8.1. Lapland sector (eastern part of the Fennoscandian Shield)

Michael V. Mints, Alexander N. Konilov, Tatiana V. Kaulina, Valery L. Zlobin, and Maria M. Bogina

8.2. Mid-Russia sector (basement of the East European Platform—Territory of the Moscow Syncline)

Michael V. Mints, Irina B. Philippova, Pavel S. Babayants, Yury I. Blokh, William A. Bush, and Alexey A. Trusov

8.3. South Baltia sector (basement of the East European Platform—Southern Baltic region and Belarus)

Michael V. Mints

Chapter 9. Late Paleoproterozoic North Voronezh intracontinental collisional orogen

Michael V. Mints, Irina B. Philippova, Pavel S. Babayants, Yury I. Blokh, and Alexey A. Trusov

- 9.1. Ryazan volcanic-sedimentary belt
- 9.2. Kaluga volcanic-plutonic belt
- 9.3. South volga megacomplex
- 9.4. Tula-Tambov volcanic-plutonic belt

Chapter 10. Late Paleoproterozoic Svecofennian accretionary orogen

Michael V. Mints

10. Introduction

- 10.1. Svecofennian passive margin of the Kola-Karelia continent
- 10.2. Svecofennian accretionary orogen

Chapter 11. Late Paleoproterozoic late- and postcollisional granitoid and alkaline magmatism

Michael V. Mints

11. Introduction

- 11.1. Collisional granitoids in the Svecofennian accretionary orogen
- 11.2. Collisional and postcollisional granitoids in the Early Precambrian basement beneath the sedimentary cover of the East European Platform
- 11.3. Postcollisional lamproites of the Por'ya Guba dike field
- 11.4. Geodynamic interpretation

Chapter 12. Study of the basement of the Russian European Platform based on a system of geotraverses and CMP profiles: 3D models of the Early Precambrian crust in key regions

Michael V. Mints, Arsen K. Suleimanov, Nadezhda G. Zamozhniaya, and Vladimir M. Stupak

12. Introduction

- 12.1. 1-EU geotraverse and cross-traverse 4B
- 12.2. 3D model of the crust under the Kola–Lapland region based on seismic images along the 1-EU geotraverse (0–450 km), EGGI, and FIRE-4-45a profiles
- 12.3. 3D model of the crust under the Karelian–Belomorian region based on seismic images in sections along the 1-EU geotraverse (300–1250 km), and profiles 4B and FIRE-1

12.4. 3D model of the Moscow Syncline based on seismic images of the crust in a section along the 1-EU geotraverse (1300–2700 km)

12.5. 3D model of the Voronezh Crystalline Massif based on seismic images of the crust in a section along the 1-EU geotraverse (2400–3600 km)

12.6. 3D model of the Volgo-Uralia basement based on seismic images of the crust in sections along the TATSEIS, ESRU 2003–2005, and URSEIS profiles

Chapter 13. Verification of the geological model of deep crustal structure: Comparison with the seismic sections constructed using a homogeneous functions method according to refracted waves

Valentina B. Piip and Michael V. Mints

13. Introduction

13.1. Methodology aspects

13.2. Section along the Kupjansk-Tumakineshima line

Chapter 14. 3D deep structure of the Early Precambrian crust in the East European Craton: A synthesis

Michael V. Mints

14. Introduction

14.1. The crust of Archean microcontinents (cratons)

14.2. Crust of Paleoproterozoic orogens

14.3. Lower crust

14.4. Crust-mantle interface

14.5. 3D model of the Early Precambrian crust of the East European Platform: Origin of the crust and paleogeodynamic reconstructions

14.6. Conclusions

Chapter 15. Specifics of the eclogite-facies metamorphism in the Precambrian

Michael V. Mints

15. Introduction

15.1. Mid-Paleoproterozoic crustal eclogites

15.2. Late Paleoproterozoic eclogites

15.3. Mesoproterozoic–Neoproterozoic eclogites

15.4. Phanerozoic eclogite complexes

15.5. Summary

Chapter 16. Granulite-gneiss belts: A special type of tectonic structure, the uniqueness of which is not limited to high-grade metamorphism

Michael V. Mints

Chapter 17. Evolution and major features of the Early Precambrian crust of the East European Craton and Lauroscandia as a whole

Michael V. Mints

17.1. East European composite craton: Origin and evolution of Archean cratons and their amalgamation and transformation history

17.2. East European craton: Origin and evolution of Paleoproterozoic orogens

17.3. North American craton: Emergence and evolution of the Paleoproterozoic orogens

17.4. Main trends in the evolutionary history of the Early Precambrian crust in Lauroscandia: A résumé

Conclusions

Michael V. Mints

Appendix I-1–I-23

Appendix II-1. Methodology of the geological interpretation of regional geophysical data

1. Geophysical and petrophysical maps and cross sections (sections of 3D models): Methods and technologies

Pavel S. Babayants, Yury I. Blokh, and Alexey A. Trusov

2. Methods of the primary geological interpretation of regional geophysical data and petrophysical models

Michael V. Mints, Pavel S. Babayants, Yury I. Blokh, and Alexey A. Trusov

Appendix II-2. Geological-tectonic maps with geodynamic elements: Methodological principles and approaches

Michael V. Mints

1. "Geological-tectonic map: The Early Precambrian of the eastern Fennoscandian shield" (App. I-1)
2. "Geological-tectonic map: The Early Precambrian of the central and eastern parts of the basement of the East European Platform" (App. I-2)
3. Principles applied to subdivision of tectonic zones and lithotectonic complexes. Symbols and notation (App. I-3)

Appendix II-3. Petrologic research techniques

Alexander N. Konilov

Appendix II-4. North American craton: Emergence and evolution of the Paleoproterozoic orogens

Michael V. Mints

1. Paleoproterozoic intracontinental collisional orogens
2. Paleoproterozoic accretionary orogens
